PROFESSIONAL SUMMARY

AI/ML Engineer and Data Scientist with 4+ years of combined software and machine learning experience, including 2 years specialized in designing and deploying machine learning models, large language model (LLM) pipelines, NLP systems, and computer vision solutions for enterprise clients across healthcare, finance, infrastructure, pharmaceuticals, and entertainment. Reduced customer response time by 65%, improved data processing speed by 300%, and delivered measurable ROI across 15+ client engagements. Proficient in Python, PyTorch, TensorFlow, LangChain, Hugging Face Transformers, YOLO, OCR, RAG architectures, and cloud platforms including AWS, Google Cloud, and Azure. Experienced in deep learning, predictive modeling, natural language processing, computer vision, backend API development, agentic AI, and MLOps/DevOps practices including Docker and Kubernetes.

TECHNICAL SKILLS

Languages: Python, Java, SQL, C++, JavaScript, HTML, CSS

ML & Deep Learning: PyTorch, TensorFlow, Keras, scikit-learn, XGBoost, Supervised Learning, Unsupervised Learning, Neural Networks

Computer Vision: YOLO, OCR, Object Detection, Image Processing

Generative AI & LLMs: GPT-3.5/4, LLaMA-2/3, Gemini, Google PaLM, Falcon, Claude, OpenAI API, Fine-Tuning, Prompt Engineering, Agentic AI, AI for Small Businesses

NLP: Hugging Face Transformers, LangChain, BERT, RoBERTa, RAG, Text Classification, Sentiment Analysis, Word Embeddings, Named Entity Recognition, Speech-to-Text (STT), Text-to-Speech (TTS)

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Feature Engineering, Data Preprocessing, Statistical Analysis, Predictive Modeling, Market Segmentation

Vector Databases: FAISS, Pinecone, Weaviate, ChromaDB, MySQL

Cloud, MLOps & DevOps: AWS (S3, EC2, Lambda), Google Cloud Platform, Microsoft Azure, Docker, Kubernetes, Git, Heroku, HIPAA-Compliant & 21 CFR Part 11 Systems

Other: Backend API Development, Role-Based Access Control (RBAC), Team Leadership, Market Segmentation

WORK EXPERIENCE

Associate Data Scientist

June 2025 – Present

SoftSensor.ai

Jaipur, India

- Design and deploy end-to-end machine learning and predictive modeling solutions for 15+ enterprise clients across healthcare and finance, directly informing product and business strategy.
- Analyze and process datasets exceeding 1M+ records using Python, Pandas, and SQL to extract actionable insights, improving client decision-making speed by 25% and shrinking time-to-insight by 30%.
- Streamline data science pipelines integrating feature engineering, model training, and performance monitoring, cutting manual data preparation effort by 40%.
- Engineer an OCR-based document and cheque processing system for Amneal Pharmaceuticals, with backend services containerized using Docker for scalable deployment.
- Architect a YOLO-based computer vision solution for PVR Cinemas to detect unwanted and prohibited items inside theatre halls in real time.
- Develop an AI-powered conversational chatbot for Isha Foundation to answer devotee queries on behalf of Sadhguru; integrate API keys to build additional RAG-based chatbots for celebrity engagement use cases.
- Construct a sandbox environment with algorithmic data deduplication and pothole detection for NHAI (National Highways Authority of India) to enhance infrastructure monitoring.

- Deliver a claim management system for NHRCL (National High Speed Rail Corporation Limited) and other government projects to streamline claims processing.

AI Associate Intern

Sroniyan Technology Private Limited

February 2025 – May 2025

Remote, India

- Completed intensive 16-week AI application development program, mastering 8 core frameworks including LangChain, Hugging Face Transformers, PyTorch, and scikit-learn.
- Developed bi-directional speech-to-text (STT) and text-to-speech (TTS) solutions tailored for customer care agents.
- Created backend APIs for machine learning, deep learning, and Generative AI models, focusing on fine-tuning for accuracy.
- Automated AI processes across Slack, Meta tools, and other platforms to enhance operational efficiency.
- Built 3 proof-of-concept AI applications using large language models and deep learning techniques, demonstrating 40% efficiency gains over traditional rule-based methods, with 2 advancing to internal pilots.

Data Science Intern

NullClass

September 2024 – December 2024

Tamil Nadu, India

- Launched a Python-based customer service chatbot using NLP and machine learning, trimming average response time from 29s to 10s (65% reduction) while handling 200+ queries daily.
- Established a medical question-answering system using BERT-based transformer models, achieving 95% accuracy on a 100-question benchmark dataset and lowering manual lookup time significantly.
- Collaborated on the integration of multiple retrieval-augmented generation (RAG) systems for medical chatbots, fine-tuning local models to meet specific project requirements.
- Applied data preprocessing, text classification, and sentiment analysis techniques, elevating model robustness across diverse healthcare query types.

Generative AI Intern

Prodigy InfoTech

August 2024 – September 2024

Remote, India

- Fine-tuned GPT-2 model hyperparameters using PyTorch for AI-driven insurance document generation, boosting text relevance by 30% and minimizing downstream editing effort.
- Optimized model inference pipeline with deep learning techniques, slashing per-document processing time from 5s to 3s (40% improvement), enabling real-time document generation at scale.

Machine Learning Engineer Intern

Feynn Labs

May 2024 – July 2024

Remote, India

- Led a 4-person team to deliver customer segmentation algorithms using clustering and unsupervised machine learning, curbing data processing time by 20%.
- Implemented K-Means and hierarchical clustering models that segmented 50,000+ customers into 8 distinct behavioral patterns with 92% accuracy.
- Presented predictive modeling findings to 10+ stakeholders, driving adoption of data-driven marketing strategies that lifted ROI by 15%.

Python Developer

Ecom Therapy Pvt. Ltd.

April 2022 – March 2024

Bengaluru, India

- Developed robust backend APIs using Python, enhancing application performance and reliability.
- Collaborated closely with DevOps and frontend teams to ensure seamless integration and deployment.
- Containerized applications using Docker to improve scalability and efficiency, implementing role-based access controls (RBAC) for enhanced security.

KEY PROJECTS

Language Model Training Tool

PyTorch, Hugging Face, Python

- Accelerated an end-to-end LLM training pipeline using deep learning best practices, shaving model training time by 40% (from 10 hrs to 6 hrs) while maintaining 95% accuracy.

RAG-Based Question-Answer System

LangChain, FAISS, Python

- Built a retrieval-augmented generation (RAG) QA system handling 500+ knowledge base queries per hour with 88% user satisfaction across multiple domains.

Text Sentiment Analyzer

BERT, RoBERTa, scikit-learn, Python

- Trained a multi-class emotion detection model using fine-tuned BERT embeddings and NLP techniques, reaching 87% accuracy across 10,000+ text samples and 6 sentiment categories.

Content Moderation System

TensorFlow, NLP, Python

- Programmed machine learning filters for self-operating content moderation, sharpening harmful content detection by 75% and paring back manual review workload by 60%.

EDUCATION

Amity University, Noida

July 2022 – July 2024

Master of Computer Applications (MCA), Machine Learning and Artificial Intelligence – GPA: 7.8/10

Sarvepalli Radhakrishnan University

March 2017 – March 2020

Bachelor of Technology (B.Tech), Computer Science

Sarvepalli Radhakrishnan University

March 2014 – March 2017

Diploma of Education, Computer Science

Central Board of Secondary Education (CBSE)

March 2011 – March 2012

Matriculation
